Bug Report

Website tested: saucedemo.com (Swag Labs)

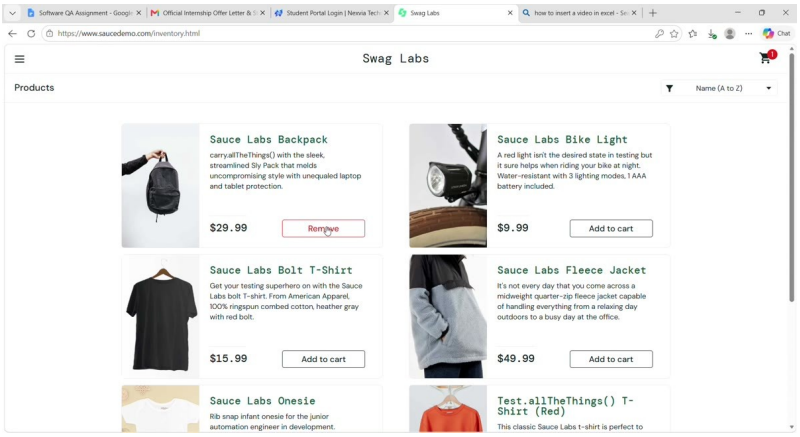

Name: Shreyas Sarkar

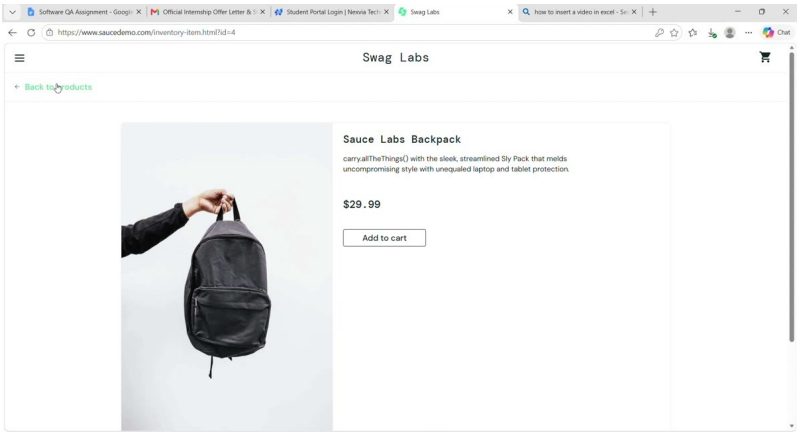

Date: 22 October 2026

Bug 1: Returning to the catalog from a product page takes 3–4 seconds

User	performance_glitch_user
Page	Product page → product catalog
Expected result	The previous (catalog) page should open instantly.
Actual result	The previous page takes 3–4 seconds to open, irrespective of the network.
Severity	Low
Why this severity	The customer can assume it is a network issue and still proceed to checkout and payment. Not a big issue for the average customer.

Video proof:

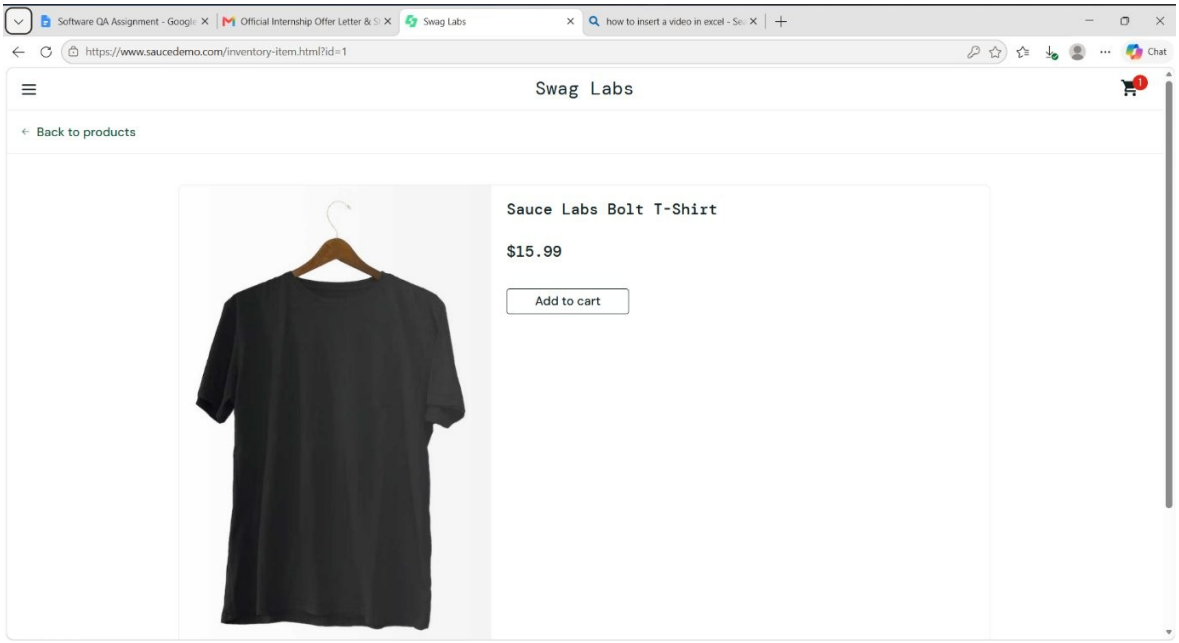

Stills from the screen recording (about 17 s): clicking "Back to products" and waiting for the catalog to load.

Bug 2: Product detail page shows no description of the product

User	error_user
Page	Product detail page (opens after clicking a product)
Expected result	The details and description of the product should be shown on the page that opens after clicking a product.
Actual result	Nothing is written about the product: what it is, what it is used for, what it is made of.
Severity	High
Why this severity	The customer may be sceptical about buying, because the description is empty and nothing persuades them to spend money on the product.

Evidence:

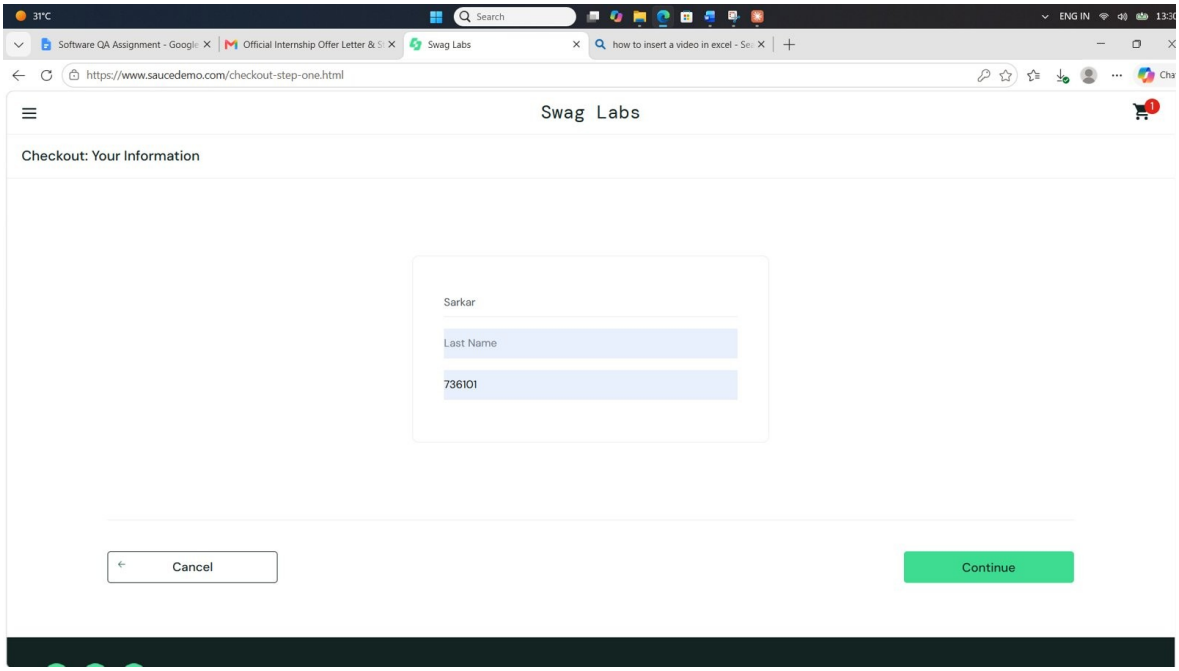

Detail page for the Bolt T-Shirt: name, price and button only, with no description.

Bug 3: Last name field on the checkout information page cannot be filled in

User	problem_user
Page	Checkout: Your Information
Expected result	The customer can type their surname into the last name field and continue to place the order.
Actual result	Whatever is typed into the last name field, it stays blank.
Severity	Critical
Why this severity	The customer will not be able to place the order.

Evidence:

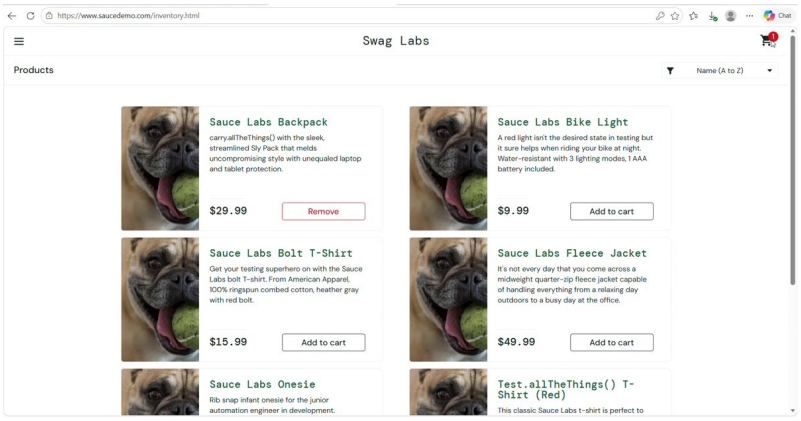

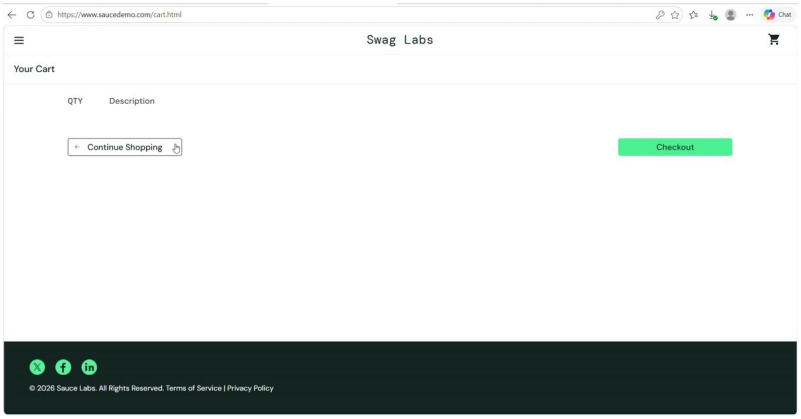

Last Name stays empty while First Name and Zip/Postal Code are filled.

Bug 4: The sorting filter does not work

User	problem_user
Page	Product catalog (first page)
Expected result	When products are sorted by price, they should be shown in price order, from the lowest to the costliest.
Actual result	After choosing a sort option, the products stay in their original (normal) order.
Severity	High
Why this severity	The average customer will think there is a problem with the sorting filter option.

Evidence:

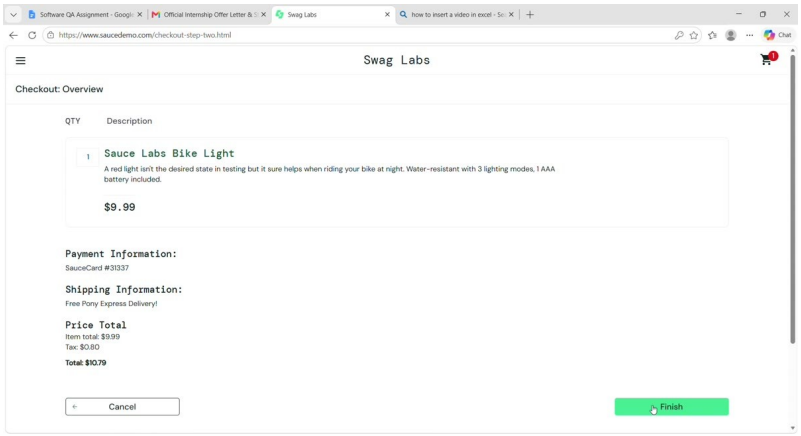

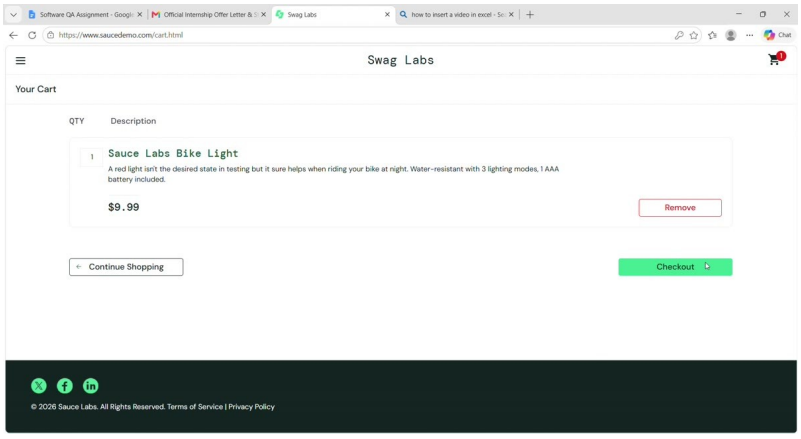

Stills from the screen recording (about 18 s): opening the sort dropdown; product order does not change.

Bug 5: The Finish button on the checkout page does not work

User	error_user
Page	Checkout: Overview
Expected result	After clicking Finish, the order should be placed.
Actual result	Finish does not lead to any other page and does not show that the order was placed.
Severity	Critical
Why this severity	The order will not be placed without clicking Finish.

Screenshot:

Stills from the screen recording (about 20 s): Finish is clicked and the page stays on Checkout: Overview.
